

PORTABLE UNIT

Important Information and Ideas for Use

IMPORTANT

1. Avoid leaving this unit in freezing temperatures with residual water inside, as impaired function may result.
2. Dropping unit may impair function.
3. This unit will become brittle and may become weakened or impaired if left exposed to hot sun for an extended period of time.
4. Avoid exposing the portable for extended time periods to hot water above 140 degrees.
5. Clean by soaking the unit in a bath of water and apple cider vinegar. Unit is dishwasher safe.
6. FOR STORAGE: Portable can be drained and stored in either direction. (spout down, or spout up)

WHAT'S IN THE BOX?
Portable Unit

IDEAS FOR USING THIS PORTABLE UNIT

HEALTH

The Portable Unit is a wonderful device to improve the flavor, neutralize the toxins, and increase the energy of any liquid or beverage. Enjoy the benefits of structuring your water, coffee, soda, tea, juice, beer, wine, or the beverage of your choice. Small enough that it can be taken to a restaurant to structure your beverages.

Simply pour the liquid thru the unit into a glass or container. One can pass a liquid through the unit as many as 6 times to achieve optimal levels of structuring.

Use the water from your unit to wash or soak your fruits and vegetables, and for use in cooking.

Pour warm water through the Portable Unit for pleasant footbaths.

GARDEN & OUTDOORS

In the garden, pour water through the Portable Unit to enhance the health and growth of your plants and flowers. Enjoy watching your plants become healthy.

Fill up the pet's water bowls, the fish aquarium, or the birdbath.

Take it hiking or camping on your next vacation.

Window washing just got a whole lot easier as structured water eliminates film and streaking.

The uses are endless!

Enjoy refreshing, life-giving, energy-enhancing water.

IMPORTANT ADDITIONAL NOTES:

1. Structured water will clean all calcium and aggregate deposits in your water pipes, and appliances that use water. So, all existing deposits need to be flushed as much as possible. Your water may be milky or discolored until the deposits have been flushed out completely, especially in older homes.
2. You may wish to contact an experienced plumber to drain the sediment in the bottom of your water heater. If your water heater has not been drained periodically the drain valve at the bottom may be corroded and may need to be replaced. The water heater may need to be drained weekly until all loosened deposits are flushed out.
